

OIL, GAS AND ENERGY SECTOR

AMP Consultants are civil and structural engineers with specialist structural steelwork experience. Our designs have been commissioned by several companies in the energy sector in the past (NEL Power, Cordell Group, Booth and Partners, and Conoco Philips).

At the South Hook Terminal, AMP designed several building structures. The structural design was prepared in accordance with BS 5950: Pt 1 and the seismic requirements of Eurocode 8. Our in-house analysis and design software adopts the most up to date 3D techniques which are electronically exported to Tekla Structures for drawing preparation.
